Bringing computational thinking to schools

Introduction:

One day, Tina and Sita were drawing on a piece of paper. They finished drawing and went to show it to their mother. Mother said, "Very nice! Let's show this to grandpa and grandma too!"

"How?" asked Tina.

"Well, let's use the computer!" said mother.

"It's that black coloured thing which father uses for work! Right, mother?" said Sita.

"Very good, Sita! Yes, it is! Let's go see it", said mother. They went into father's room to see the computer.

"Wow! This computer looks so nice!" said Tina, running to the computer.

"Be careful!", said mother.

"This computer has so many parts… why does the computer have so many parts?" asked Tina.

"That is a great question!" said mother. "Every part of the computer is important."

Mother explained the parts of a computer to Sita and Tina..

Draw a circle around the answer:

1. I want to **point** to the apple on the monitor. What will I use?

2. I want to type a letter to send to my friend. What will I use?

3. I want to listen to a song. What will I use?
