

For teachers only

Questions: (\* questions can be used for evaluation)

1. Can you identify if the below numbers are in arithmetic progression?

Write down the reason for your answer in each case

- a)  $\{1, 2, 3, 4, 5, 6, 7, 8\}$
- b)  $\{-1, 1, 3, 5, 7, 9\}$
- c)  $\{1, 5, 8, 1, 5, 8\}$

Answers:

- a. The numbers  $\{1, 2, 3, 4, 5, 6, 7, 8\}$  are in arithmetic progression because they have a common difference of 1

$$2 - 1 = 1$$

$$3 - 2 = 1$$

$$4 - 3 = 1$$

$$5 - 4 = 1$$

$$6 - 5 = 1$$

$$7 - 6 = 1$$

$$8 - 7 = 1$$

- b. The numbers  $\{-1, 1, 3, 5, 7, 9\}$  are in arithmetic progression because they have a common difference of 2

$$1 - (-1) = 2$$

$$3 - 1 = 2$$

$$5 - 3 = 2$$

$$7 - 5 = 2$$

$$9 - 7 = 2$$

- c. The numbers  $\{1, 5, 8, 1, 5, 8\}$  are not in arithmetic progression because they don't have a common difference of 1

$$5 - 1 = 4$$

$$8 - 5 = 3$$

$$1 - 8 = -7$$

2. In your school can you identify some patterns that are repeating itself?

Some examples

Each class has sections A, B, C, D this pattern repeats itself from class 1 to class 8

Each day is divided into 6 periods with 2 breaks. They repeat every day from

Monday to Friday

3. With your knowledge on modulo arithmetic can you solve the following?

- $* 24 \text{ Mod } 12 =$
- $* 15 \text{ Mod } 30 =$
- Can you identify a relationship between the first and second problem?
- $* 10 \text{ Mod } 2 =$
- $* 2 \text{ Mod } 2 =$
- If  $10 \text{ Mod } x = 1$  can you find one value of  $x$
- If  $20 \text{ Mod } x = 3$  then find  $x$
- If  $X \text{ mod } 5 = 3$  can you find one value of  $x$
- If  $x \text{ mod } 7 = 2$  can you find one value of  $x$

- a) To calculate  $24 \text{ Mod } 12$ , first we should divide 24 by 12 and see the remainder

$$\begin{array}{r} \underline{2} \\ 12 \overline{) 24} \\ \underline{24} \\ 0 \end{array}$$

Therefore  $24 \text{ Mod } 12 = 0$  or we can say  $0 \text{ Mod } 12$  is congruent to  $24 \text{ Mod } 12$

- b) To calculate  $15 \text{ Mod } 30$ , first we should divide 15 by 30 and see the remainder

$$\begin{array}{r} \underline{0} \\ 15 \overline{) 30} \\ \underline{30} \\ 0 \end{array}$$

Therefore  $15 \text{ Mod } 30 = 0$  or we can say  $0 \text{ Mod } 30$  is congruent to  $15 \text{ Mod } 30$

**Modulo Arithmetic**  
**Work Sheet: 08-IP-01-WS**

c) Can you identify the relationship between the first and second problem?

We see that the remainder for both the questions is 0 so we can say

24 Mod 12 is congruent to 15 Mod 30

d) \* 10 Mod 7

$$\begin{array}{r} 1 \\ 7 \overline{) 10} \\ \underline{07} \\ 03 \end{array}$$

Therefore 10 Mod 7 = 3

e) \* 23 Mod 12

$$\begin{array}{r} 1 \\ 12 \overline{) 23} \\ \underline{12} \\ 11 \end{array}$$

Therefore 23 Mod 12 = 11

f) If 10 Mod x = 1 can you find one value of x

$$\begin{array}{r} 3 \\ 3 \overline{) 10} \\ \underline{09} \\ 01 \end{array}$$

Also we see

$$\begin{array}{r} 3 \\ 3 \overline{) 10} \\ \underline{09} \\ 01 \end{array}$$

**Modulo Arithmetic**  
**Work Sheet: 08-IP-01-WS**

So we can write  $10 \text{ Mod } 9 = 1$  or  $10 \text{ Mod } 3 = 1$  or  $10 \text{ Mod } 9$  is congruent to  $10 \text{ Mod } 3$

$$10 \text{ Mod } 9 \equiv 10 \text{ Mod } 3$$

g) If  $20 \text{ Mod } x = 3$  then find  $x$

$$\begin{array}{r} 3 \\ 17 \overline{) 20} \\ \underline{17} \\ 03 \\ \hline \end{array}$$

h) If  $X \text{ mod } 5 = 3$

In this example, we should find a number that can be divided by 5 leaving a remainder 3

$$\begin{array}{r} 2 \\ 5 \overline{) 13} \\ \underline{10} \\ 03 \\ \hline \end{array}$$

$$\begin{array}{r} 4 \\ 5 \overline{) 23} \\ \underline{20} \\ 03 \\ \hline \end{array}$$

$$13 \text{ Mod } 5 = 3 \text{ or } 23 \text{ Mod } 5 = 3$$

We can also write  $13 \text{ Mod } 5$  is congruent to  $23 \text{ Mod } 5$

$$13 \text{ Mod } 5 \equiv 23 \text{ Mod } 5$$

i. If  $x \text{ mod } 5 = 3$  find the value of  $x$

Think of a number that when divided by 5 will give a remainder 3

**Modulo Arithmetic**  
**Work Sheet: 08-IP-01-WS**

If we take any number say 'a' and multiply it with 5 and add 3 to it we will get the required answer

Lets, try it out

$$\text{Let } x = 3 * 5 + 3 = 18$$

$$18 \bmod 5 = ?$$

$$\begin{array}{r} 3 \\ 5 \overline{) 18} \\ \underline{15} \\ 03 \\ \underline{\phantom{00}} \end{array}$$

So the answer would be any number multiplied by 5 plus 3

j. If  $x \bmod 7 = 2$  find x

Think of a number that when divided by 7 will give a remainder 2

If we take any number say 'a' and multiply it with 7 and add 2 to it we will get the required answer

Lets, try it out

$$\text{Let } x = 3 * 7 + 2 = 23$$

$$23 \bmod 7 = ?$$

$$\begin{array}{r} 3 \\ 7 \overline{) 23} \\ \underline{21} \\ 02 \\ \underline{\phantom{00}} \end{array}$$

So the answer would be any number multiplied by 7 plus 2
