

Your SAC certification

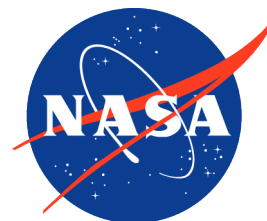

Congratulations! You have completed your very first Sky Survey and taken the first step to become a citizen and community scientist. Here is your digital Cloud Quest badge. Share it with your family and friends!

Next steps:

You now have the skills to conduct Sky Surveys all the time. You have the tools and the expertise to teach others in your community how to conduct Sky Surveys as well. Remember that your contributions are valuable. Every time you make a Sky Survey you are helping verify data at NASA. You are also a critical part of helping scientists figure out the connections between clouds and climate to slow the effects of climate change. Our team here at SAC and our friends at GLOBE thank you for your contributions as a community and citizen scientist!
